Sprint 1 Report

Heading: Sprint #1 Report, TutorTube, Team TutorTube, February 13, 2017

Actions to Stop Doing: The team stopped using Django and changed to Web2py because of complications in downloading Django onto our computers and because it was setting us back from schedule.

Actions to Start Doing: The team should start holding more regular and formal scrum meetings, since it is sometimes unclear what has been and needs to be completed. The team should meet up more often to do group programming, since it is productive. The team should start thinking more realistically about the amount of hours it takes to complete tasks, since we worked more hours than expected on several tasks and were unable to complete all of the tasks for this sprint.

Actions to Keep Doing: The team should continue to meet all together every Tuesday and Thursday because those days are when the entire team is available and we can discuss progress. The team should continue to communicate outside of meetings and class through our Facebook chat, since it is helpful in answering questions and keeping everyone up to date.

Work Completed: As a user I want to be able to create an account and login. As a developer I want to make a user database to keep track of users. As a developer I want to create a login page and controller so that users can login and submit a form to create an account.

Work Not Completed: As a user I want to specify if I am a professor, TA, or student.

Work Completion Rate:
Total number of user stories completed during the prior sprint: three user stories
Total number of estimated ideal work hours completed during prior sprint: eleven hours
Total number of days during the prior sprint: 22
User stories/day: .1818
Ideal work hours/day: .5
